

# Environmental Monitoring and Automation

## Automatic temperature, humidity and pressure monitoring

Automated environmental monitoring displays and transmitters are used in the field to record conditions of critical areas in food/pharmaceutical manufacturing processes or other applications where recorded data is required. A centralised control is integrated with easy to use software for real-time monitoring and export of data. For hassle-free data recording of critical environments.

Differential pressure switches/transmitters used in fan applications to operate a VSD for maximum power and efficiency. Current switching used for automatic operation of centralised equipment and operation of gate valves.

### Features:

- CSV data export
- Software and analytics
- IP rated field transmitters
- Professional advice and installation by certified electricians
- Energy savings
- Increased power
