

Control Valves and Dampers

Motorised, pneumatic and manual options available in slide dampers, butterfly and gate valves. Used to close ducting distribution to increase performance and increase energy efficiency. Also used for automatic operation of centralised dust collectors.

Automatic Damper (AD) is used in the central extraction systems with many suction points to cut off the points that are not in use in certain moment of time. Dampers are electrically driven and are controlled automatically through ICE-LC control box.

Features:

Automatic Damper (AD) is one of the components of the Intelligent Control System

Valves and dampers are made to order and are custom built to suit application
